SUPPLEMENTARY MATERIALS

Supplementary Table 1. Biofilm formation data.

No. of Exp.	No. of Readings	Control	SDL03	SDL07	SDL32	SDL35	SDL40
1	Reading 1	0.331	1.573	0.732	1.486	2.246	0.442
	Reading 2	0.337	1.503	0.726	2.283	2.267	0.340
	Reading 3	0.334	1.658	0.744	2.147	2.169	0.346
	Reading 4	0.346	1.739	0.720	2.321	2.281	0.376
2	Reading 1	0.342	1.883	0.828	1.805	2.366	0.300
	Reading 2	0.338	1.822	0.948	2.189	1.840	0.327
	Reading 3	0.332	2.042	0.821	1.808	2.209	0.332
	Reading 4	0.332	1.364	0.794	1.976	2.417	0.390
3	Reading 1	0.347	1.310	0.739	1.997	2.548	0.410
	Reading 2	0.347	1.690	0.740	1.929	1.976	0.344
	Reading 3	0.340	1.597	0.731	1.869	2.420	0.534
	Reading 4	0.349	1.895	0.746	1.497	1.784	0.400
Overall Average		0.340	1.673	0.772	1.942	2.210	0.378
OD value compared to control			4.927	2.275	5.720	6.509	1.114
Biofilm Status			Strong	Weak	Very Strong	Very Strong	Very Weak

Supplementary Table 2. Pearson correlations between biofilm formation capacity and antibiotic resistance pattern.

Antibiotics→	AMK	GEN	IPM	MEM	CRO	FEP	CIP	LVX	SXT	AMP	TZP	CST	PMB	TGC
Pearson Correlation	0.431	0.431	*a	*a	*a	*a	*a	0.584	*a	*a	*a	*a	-0.201	*a
Sig. (2-tailed)	0.469	0.469	*	*	*	*	*	0.301	*	*	*	*	0.746	*
Total Strains	5	5	5	5	5	5	5	5	5	5	5	5	5	5

*Correlation is significant at the 0.01 level (2-tailed).

a=Cannot be computed because at least one of the variables is constant.

Supplementary Table 3. The accession number of 50 *A. baumannii* strains used to construct phylogenomic trees.

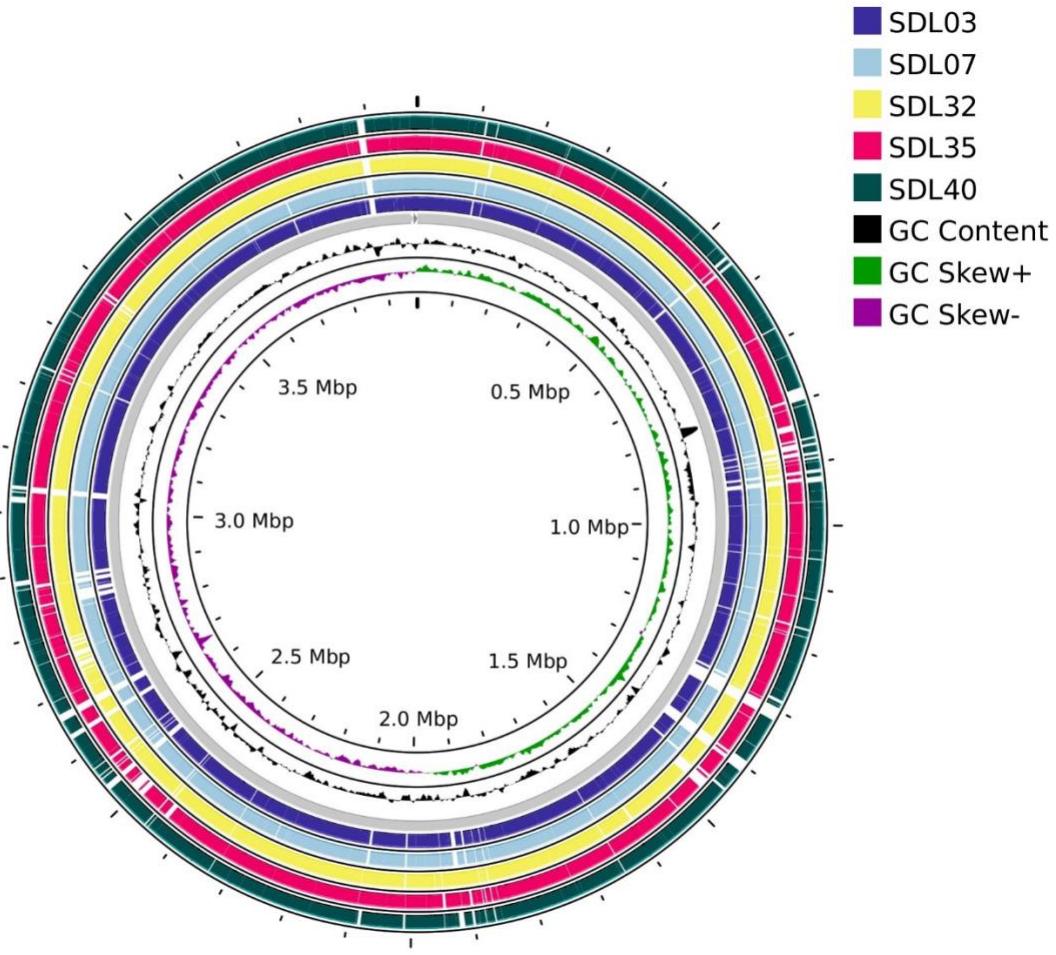

Strains	BioSample	Isolation country

Supplementary Figure 1. Sequence alignment of five *A. baumannii* strains. The GC content is shown in black.

Supplementary Figure 2. Matrix heatmap of the pairwise Average Nucleotide Identity (ANI). ANI values between 5 *A. baumannii* strains alongside the 45 selected strains with a cutoff score >97%, were obtained from FastANI. Each cell represents the ANI values between two strains, with the strains listed on both the x-axis and y-axis. The color gradient corresponds to ANI values, where light peach indicates the lowest ANI values (around 97%) and maroon indicates the highest ANI values (around 100%).

Supplementary Figure 3. Sample figures showing disk diffusion test results for five studied *A. baumannii* strains against various antibiotics. In Figure (A), strain SDL03 with no zone of inhibition for MEM and a zone diameter of 22 mm for TGC; in Figure (B), strain SDL07 shows zone diameters of 24 mm for AMK, 33 mm for LEV, and 25 mm for SXT; in Figure (C), strain SDL32 with no inhibition zones for AMP, FEP, CIP, and CN; in Figure (D), strain SDL35 with no zone of inhibition TZP and a zone diameter of 11 mm for IPM; and in Figure (E), for strain SDL40, the zone diameters are 18 mm for TGC, 11 mm for IPM, and 0 mm for CRO.
